

BL 11-23-70

Dear Mr. Tuck:

I'm sorry that I cannot fill out the attached form since the times and dates of any sightings escape me. I can, however, tell you that during the years 1948 through 1951 several sightings of green lights were made at Los Alamos. These usually occurred during the early part of the night, nine to eleven, and were usually in the Jemez Mountains.

I can recall several instances of green lights weaving in and out of Mountain peaks. This was all reported to the Protective Force Headquarters and should be a matter of record on their logs.

I also recall one instance of five objects flying over Los Alamos in the afternoon. They were flying from Southeast to Northwest and appeared to be flying in formation. I believe (b)(6) of the Protective Force was one of the five or six people that

sighted these objects. Another person
you might check with is (b)(6)
of the protective force. Any of the
Protective Force Members that was on
the "Hill" during the early '50
should recall all the reported sightings
during this time.

I'm sorry that I can't be of more
help. I'm sure however, if you can obtain
access to the pro force logs during
the above periods that the information
can be obtained as to time and date of
the known light sightings —

Good Luck.

Dear (b)(6)

As agreed in our telephone conversation of today's date, I would like to have the recipe that was used for the simulated atomic bomb demonstrations.

We are interested in the large atmospheric vortices which are produced as reported in the book "Scientific Study of Unidentified Flying Objects" by Dr. Edward U. Condon.

Yours sincerely,

JLT:gae

Dear Jim:

Mindful of your interesting report on ball lightning, I am enclosing comments on same by a UFO believer, James M. McCampbell, in his UFOLOGY, 1976, appearing on the new non-fiction shelf at the Mesa Library, call number 629.1338
M125u.

His chapter FLIGHT AND PROPULSION strengthens my conviction that Einstein, while seemingly straying from the main current of physical research in his later years, was on scent like a bloodhound when he persisted in trying to lock in on a unified field theory.

Regards,

(b)(6)
